Subject: Test Protocol

I do all the testing personally with my assistant.

Day 1- case detail analysis and scanning for bio chip implants

Day 2- directed energy spectrum analyzer testing

Day 3- directed energy testing with passive shielding

Day 4- directed energy testing with active shielding

Day 5- directed energy final analysis.

Sessions run about 6 hours a day. Some day sessions, some night sessions.

Total cost of testing \$2,500.00

Note: If you need both the passive and active shielding systems for ongoing protection the cost for those is \$1,500.00.

Roger

Subject: test protocols

hi I will take the test protocols and forward them right onto my lawyer and read them.

this is a criminal defense case so we got some money to work with. we're trying to prove the cops/state and involved parties did this to me.

if you happen to have any pamphlets or other info to send on your credentials and what you do, send it over. this is useful to helping to get funding to pay for the testing to be done.
